I. INTRODUCTION

In December 1998 the Delivery and Customer Services Equipment Engineering division of the United States Postal Service (USPS) issued Specification USPS-E-PURC for the procurement of six Pilot Model Electric Carrier Route Vehicles (ECRVs) "for examination and testing within the time frame specified by the Contracting Officer (CO), to prove that the production methods will produce vehicles that meet the requirements specified herein".

On December 22, 1999 the USPS announced that Ford Motor Company had been selected to build the first 500 EVs of the demonstration program.

In April 2000, the USPS and South Coast Air Quality Management District (AQMD) recognized Southern California Edison's technical leadership position in the electric vehicle (EV) field and recommended that Baseline Performance and Accelerated Reliability Tests be performed at SCE's Electric Vehicle Technical Center (EVTC) in Pomona, California, with oversight of the Department of Energy (DOE) Field Operations Program.

Under the terms of AQMD contract No. 00192, awarded on July 28, 2000, SCE was to perform the following tasks:

- Task 1 – Baseline Performance Test Procedures Evaluation and Modification
- Task 2 – Accelerated Reliability Test Procedures Evaluation and Modification
- Task 3 – Conduct Baseline Performance Tests on two ECRVs
- Task 4 – Conduct Accelerated Reliability Tests on two ECRVs

Tasks number 1 and 2 were completed on August 10, 2000 when revision 0 of the Baseline Performance and Accelerated Reliability test Procedures were issued and forwarded to the USPS.

Tasks number 3 and 4 started in late August when SCE received USPS approval to operate the four vehicles delivered to the EVTC on July 5, 2000.

Task 3 was completed on November 15, 2000 and vehicle Nos. 1240003 and 1240004 were returned to Ford Motor Co.

This quarterly report presents the progress to date on Task 4, the Reliability Tests, as of September 17, 2001.

II. ACCELERATED RELIABILITY TEST RESULTS TO DATE

2.1 Vehicle Mileage and Energy Usage Since Inception

Postal vehicles 1240001 and 1240002 (also referred to as Vehicles #1 and #2) have been on an accelerated mileage regimen in which they are expected to achieve over 20,000 miles in a one-year period. During testing, all mileage, ambient temperature and energy usage is collected for each drive on log sheets (Appendix A, page 8). Energy is also recorded by a kilowatt-hour measuring device, which is downloaded periodically. Table 2.1-1, below, summarizes the cumulative mileage and energy usage recorded at the end of the third quarter 2001.

Table 2.1-1 – Vehicle Mileage and Energy Usage – As of September 17, 2001

	ECRV #1	ECRV #2
Start Odometer	153	143
Current Odometer	19,115	20,219
Total Miles Driven	18,962	20,076
Total ACkWh Used	11,727*	12,555
AC kWh/mile	0.62	0.62

*Extrapolated due to two weeks of data missing during the 2nd quarter 2001 and one month during the 3rd quarter 2001 (ABB meter calibration).

Please refer to Figure 2.1-1. It shows the growth of recorded miles since the beginning of the tests.

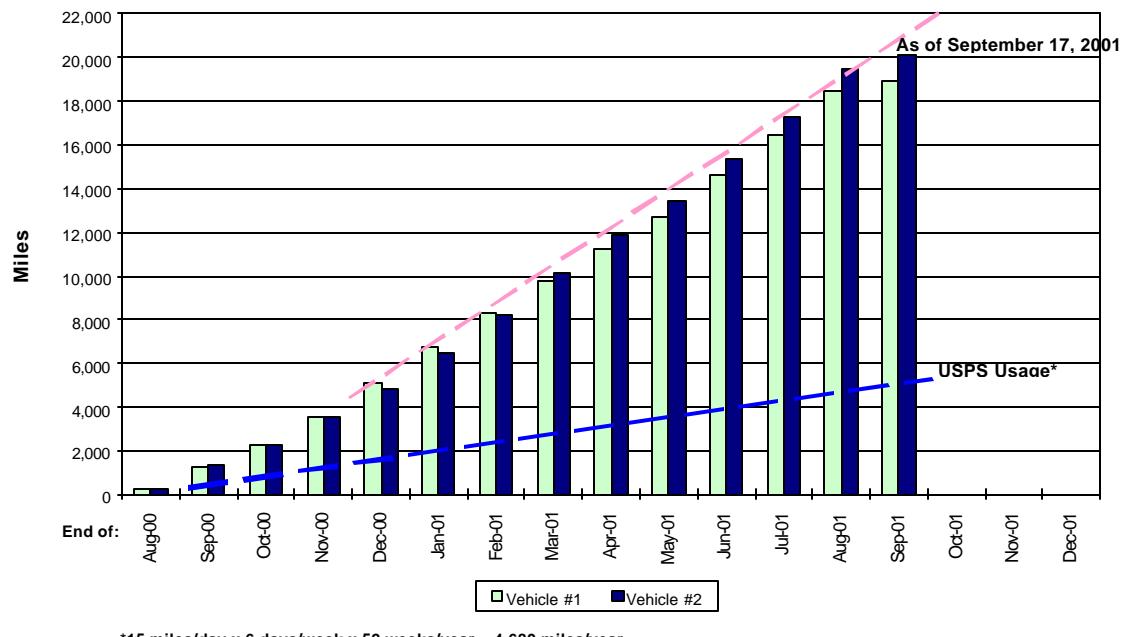

Figure 2.1-1 Cumulative Distance Driven by Vehicles No. 1 and No. 2

2.2 Operating Cost Analysis

To get “real world” electricity usage (miles per kWhr) and cost (cents per mile) data, the odometers of all the ECRVs at the Fountain Valley USPS facilities were read on June 1, 2001, before the vehicles were leaving for their daily route (Figure 2.2-1). The odometers were read again on July 2, 2001 (Table 2.2-1) and the ABB (recording) kWhr meter, which serves all the charging stations, was downloaded (Figure 2.2-2 and Table 2.2-2).

As shown on Table 2.2-1, the 28 ECRVs logged 8,653 miles during the month. Table 2.2-2 indicates that 9,446.40 kWh were used during the period. These two numbers yield an average of 1.09 kWh/mile energy efficiency. The “fuel cost”, based on the “Billing Usage Summary” shown in Appendix B1, is $1.09 \text{ kWh/mile} \times \$0.2235/\text{kWh} = \$0.244/\text{mile}$.

However, it should be noted in Appendix B1 that a significant amount of electricity was used to charge the ECRVs during the On-Peak (Time of the Day) periods (1,045 kWh). **The USPS should avoid this situation.** If all vehicle charging had been done Off-Peak, the total monthly bill (Appendix B2) would have been \$1,565.25 (\$0.1719/kWh). The fuel cost would have been $1.09 \text{ kWh/mile} \times \$0.1719/\text{kWh} = \$0.187/\text{mile}$. The total energy usage of Appendices B1 and B2 (9,107 kWh) do not match the total shown in Table 2.2-2 (9,446.4 kWh) because the “As Billed” Service Period was 06/04/01 to 07/03/01 and the “Logged Period” (Table 2.2-1 and 2.2-2) was 05/01/01 to 06/01/01.

It is also interesting to note (Table 2.1-1) that under a “harder” driving schedule the ECRVs are more efficient (0.62 kWh/mile). In this instance the fuel cost would have been (assuming no on-peak energy usage): **$0.62 \text{ kWh/mile} \times \$0.1719/\text{kWh} = \$0.106/\text{mile}$** .

To document individual ECRV charging patterns and energy use, a portable ABB meter was installed at a randomly selected charging station. The meter documents the start time, end time, and profile of the charging energy demand. Figure 2.2-3 shows some level of charging during the week ends and partially explains the less than optimal energy efficiency of the vehicles.

2.3 Vehicle Range

Range tests are being performed periodically with the accelerated reliability vehicles on the Pomona Urban Loop (See Pomona Loop Map in Appendix C, page 48). All tests are performed at maximum payload (1250lbs) with no auxiliary loads (UR3).

The vehicles are driven until they reach the stop condition, which is when the battery light begins to flash. The vehicles can be safely driven further past the stop condition for a few more miles until the Power Limit light comes on solid. When the Power Limit light begins to flash the vehicle's top speed will be reduced to 25 mph (to protect the battery pack).

Table 2.3-1, below, shows the range results obtained as of September 18, 2001. As can be seen on the table, the vehicles generally complete in excess of 40 miles on the Pomona Loop. The most recent range test data sheets are included in Appendix D, page 49.

2.5 Vehicle Availability

Please refer to Figure 2.5-1 for records of the monthly availability of vehicles No. 1 and 2 since the test started.

Note that the formula shown on Figure 2.5-1 does not qualify the Downtime Days, i.e. downtime during weekends has the same impact as downtime during working days since the ECRVs deliver mail on Saturdays and should be available on Sundays.

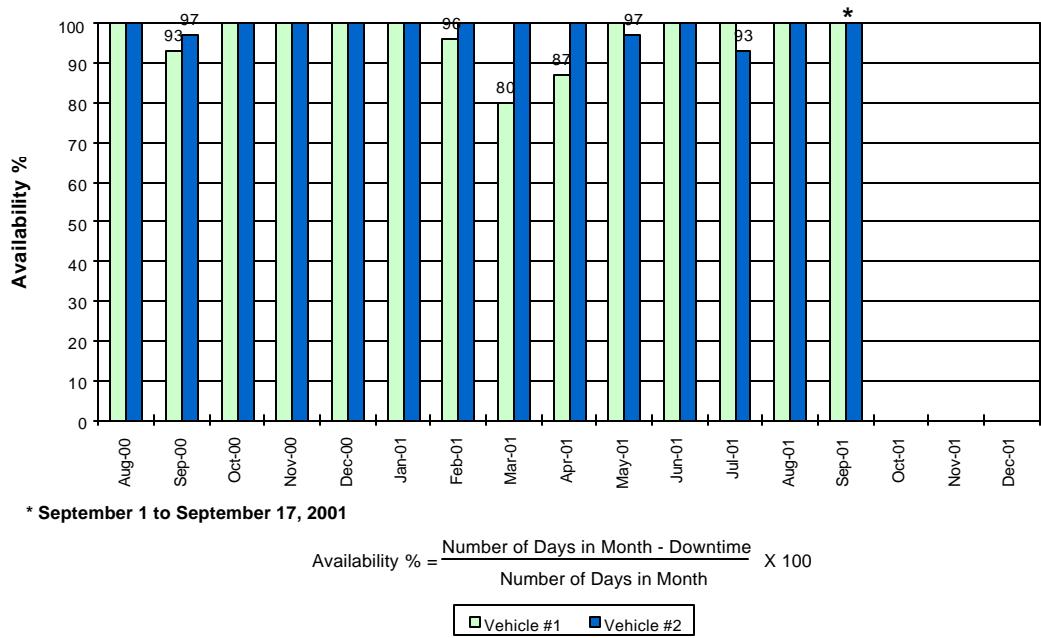

Figure 2.5-1 Monthly Vehicle Availability - Accelerated Reliability Testing

2.6 Conclusions

Considering the demanding driving conditions of the reliability tests, overall availability has been good. Vehicle No. 1 has a 96.3% recorded availability from August 2000 to September 17, 2001. Vehicle No. 2 has a 99.0% recorded availability for the same period.

However, several changes to the battery management algorithm have been made during the period and, although improvements were made, we did not have a true "controlled" test.

We recommend that at least one ECRV continues the reliability test to fully explore battery life issues and to identify other areas of improvement as the drivetrain and the parts of the vehicle continue to get mileage.
